

(NOTE: The June 11 master tape was lost at WUSB and so that program will be used for June 18. This program is a repeat of the second half of the original April 2, 1984, program, reformatted for the 15-minute version not sent to WLIR and the Hornell stations. All other stations have sufficient tapes to make their weekly commitments the week of June 18.)

INTRO UP AND UNDER

Hi, everybody!

Divorce, some cynical wag has observed, is a natural outcome of marriage. In fact, about half of all recent marriages are likely to end in divorce. The 1970s have been called "the decade of divorce" by Graham B. Spanier. Dr. Spanier is professor of sociology and psychiatry at the State University of New York at Stony Brook and the co-author of two books about divorce being published in 1984. One is called "Parting: The Aftermath of Separation and Divorce," written with Dr. Linda Thompson of Virginia Polytechnic Institute and State University. Dr. Spanier's second book is entitled "Recycling the Family: Remarriage after Divorce," which was written with Dr. Frank Fustenberg of the University of Pennsylvania. Dr. Spanier, despite high divorce rate statistics, you state in your book, "Parting," that you do not accept the premise that this high rate signifies the demise of the American family.

INTERVIEW SPANIER (SEE APRIL 2 SCRIPT FOR DETAILS)

BRIDGE UP AND UNDER

Next week we'll be talking about a strange but very common tumor called the papilloma virus. You and I know this as warts. Warts are one of nature's major mysteries. Next week, we'll talk about warts with a scientist whose chief research is aimed at finding why this odd virus strikes humans, and other animals, literally on and in any part of their bodies. Until next week, this is Al Oickle. So long, everybody.
