

A Friend Dies. Who Cares?

We do. If that friend died from toxic drinking, you might have been able to prevent it. Toxic drinking means drinking so much, so fast, you pass out. But did you know that after passing out, blood alcohol levels can keep climbing, depressing heartbeat, slowing breathing, causing death? To prevent that, join the **Red Watch Band**. We're students, like you, who care about our friends. And we've learned the quick steps to take to prevent death after a drinker passes out and can't be awakened.

The life you save may be your best friend's.
