STONY BROOK UNIVERISTY

The Emergency Management Plan

The Emergency Management Plan establishes the policy, procedures, and organizational structure to respond, control and recover from emergency situations. The Incident Command System (ICS) is used to organize the emergency management team in functional positions (e.g. Command, Planning, Operations, Logistics and Finance/Administration). The plan adopts an "all hazards" approach to include responses to all types of emergencies, including Acts of Terrorism, Civil Disturbance, Explosion, Fire, Flooding, Foodborne Illness, Hazardous Material, Severe Storm and Utility Failure. The plan recognizes and establishes the following priorities for emergency response and restoration of operations:

1. Protect and save the life of those who learn, work, visit, and are cared for at Stony Brook.
2. Protect and preserve University property, the environment and maintain integrity of facilities.
3. Restore University operations, activities, and services.
4. Provide assistance to local community and external gencies.

Details of this plan are only available to members of the Emergency Management Team.
